ACCESCO LIVING PRIVATE LIMITED

Industrial Research Project Themes

Work From Home | Academic Research Partnership 2026-27

DPIIT #startupindia

About This Initiative

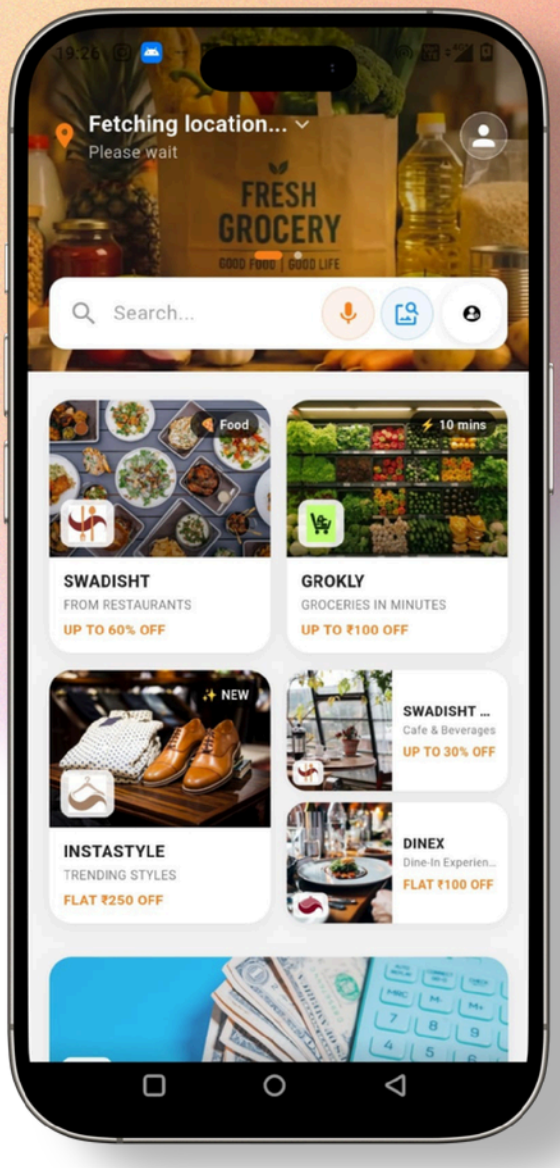

Accesco Living Private Limited invites outstanding students and researchers from India's premier institutions to collaborate on industrial research themes that will directly shape the architecture of India's next-generation Household Economy OS. Each project offers real-world impact, mentorship, and formal recognition. CIN: U47912WB2025PTC285309 | Bengaluru, Karnataka, India

Table of Contents

Overview of All Sections

- 01. Autonomous Commerce Systems
- 02. Household Digital Twin Framework
- 03. Hyperlocal Demand Intelligence Networks
- 04. CommerceOS of the Future
- 05. Future of Commerce Beyond Search
- 06. Researcher Benefits & Perks
- 07. Eligibility & Engagement Details
- 08. How to Apply

01. Autonomous Commerce Systems for Indian Households

Research Scope

Current commerce platforms depend on customers placing orders. This research explores how predictive technologies, consumption intelligence, and behavioural analytics can enable autonomous commerce systems that anticipate household requirements before explicit demand is generated.

Key Areas:

- Predictive household demand modelling
- Consumption intelligence frameworks
- Anticipatory commerce systems
- Automated replenishment architecture
- Future-ready commerce ecosystems

02. Household Digital Twin Framework for Next-Generation Commerce

Research Scope

This project investigates the feasibility of creating digital representations of household consumption behaviour, enabling simulations, forecasting, and intelligent decision-making within commerce ecosystems.

Key Areas:

- Digital twin architecture
- Household behaviour modelling
- Consumption forecasting
- Simulation-driven commerce
- AI-assisted lifestyle intelligence

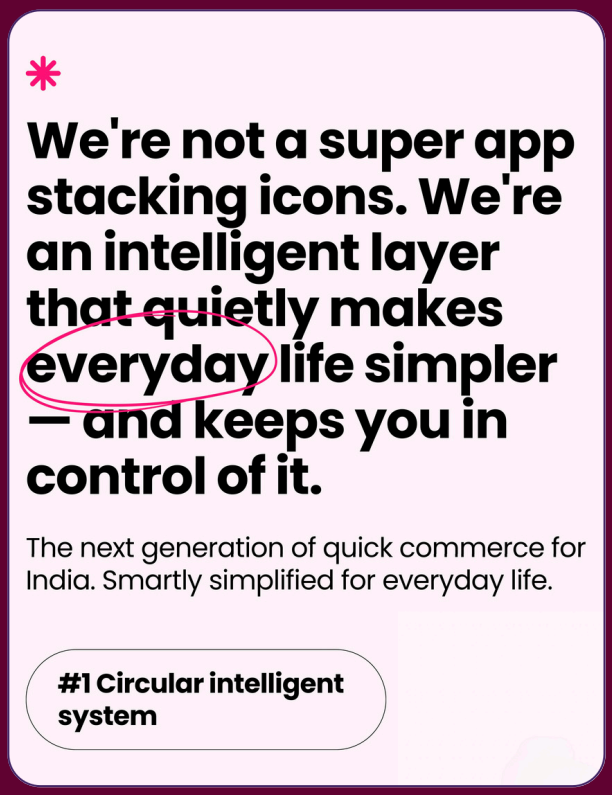

03. Hyperlocal Demand Intelligence Networks for Urban Commerce

Research Scope

This research develops predictive demand intelligence models capable of forecasting neighbourhood-level consumption patterns, improving inventory positioning, operational efficiency, and service responsiveness.

Key Areas:

- Demand sensing mechanisms
- Geospatial commerce intelligence
- Urban consumption analytics
- Inventory forecasting frameworks
- Predictive fulfilment systems

04. Designing the Commerce Operating System (CommerceOS) of the Future

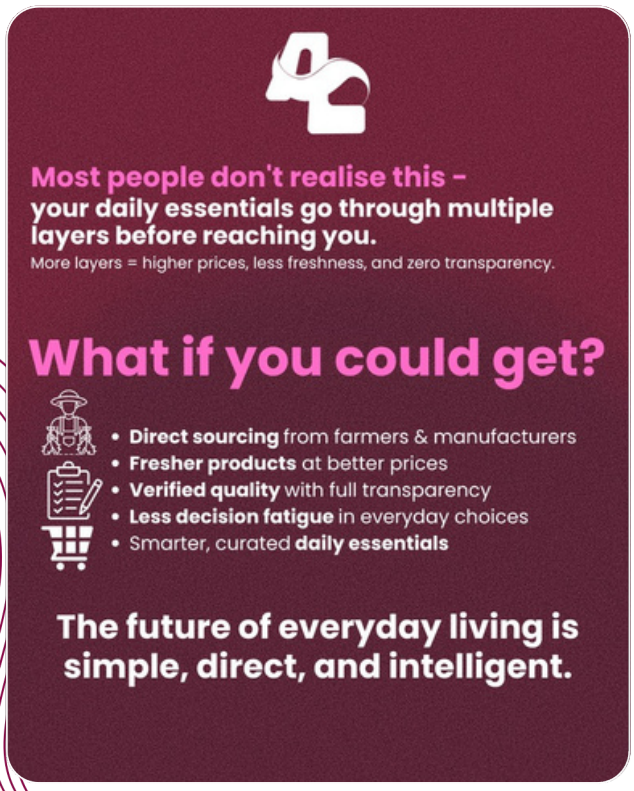

Research Scope

This project explores a unified operating system integrating commerce, household management, consumption planning, budgeting, and intelligent assistance into a single ecosystem designed around everyday living.

Key Areas:

- Commerce infrastructure design
- Household operating systems
- Intelligent lifestyle orchestration
- Unified consumer ecosystems
- Future commerce architecture

05. The Future of Commerce Beyond Search and Transactions

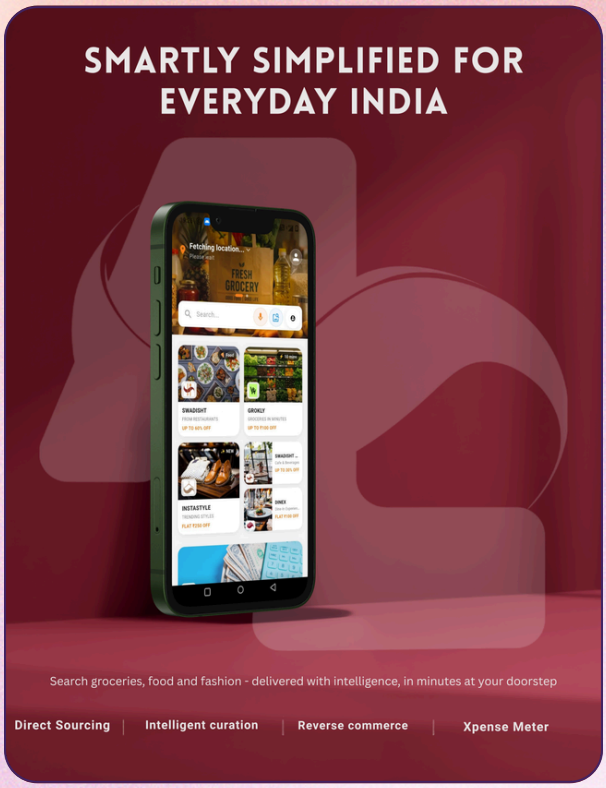

Research Scope

This research studies how commerce may evolve beyond traditional search-based and transaction-driven models towards context-aware, intent-driven, and AI-assisted experiences.

Key Areas:

- Intent-based commerce
- Contextual purchasing behaviour
- AI-assisted decision systems
- Consumer journey transformation
- Emerging commerce paradigms

Expected Outcomes: Industry Research Report | Strategic Whitepaper | Framework Development | Innovation Recommendations | Future Commerce Roadmap | Executive Presentation Deck

Researcher Benefits & Perks

Performance Stipend

Merit-based monetary stipend awarded upon successful project completion.

Certificate of Excellence: Officially issued Certificate of Research Excellence from Accesco Living.

Letter of Recommendation: Personalised LOR signed by company leadership for top performers.

Public Recognition

Founding Member Access: Early beta access to Accesco Living platform with founding-member status.

Patent filing with research paper recognition (based on project scope & result)

Mentorship & Career Growth

1-on-1 virtual mentorship with Accesco founders and industry advisors. Top performers considered for full-time or internship roles. Exclusive access to our founder and investor network events (virtual).

Eligibility & Engagement Details

WhoShouldApply

Eligible Institutions: IITs, NITs, IIITs, BITS, IISc, IIMs and other premier institutions across India.

Eligible Disciplines: Engineering, Data Science, AI, Economics, Product Management, Design, Business Research.

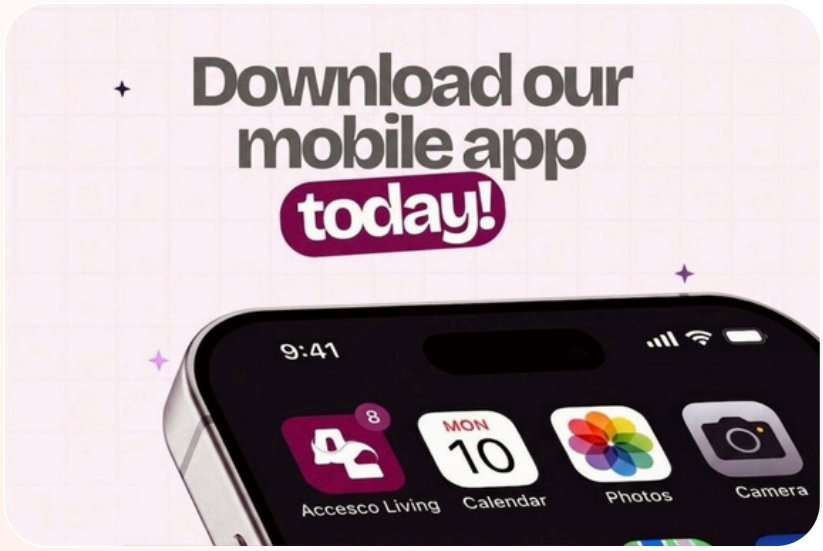

Engagement Mode: 100% Work From Home — flexible hours with structured weekly deliverables.

Duration: 6 to 12 weeks, negotiable based on project scope.

Team Size: Individual researchers or teams of up to 3 members.

Application: Rolling admissions — limited cohort seats, apply early.

How to Apply

Steps to Submit Your Application

1. Send yourCV andStatementofInterest(200-400 words) to research@accescoliving.com
2. Subject line: Research Application - [Project Number] - [Your Institution]
3. Attach a short write-up on why you chose the project theme
4. Shortlisted candidates contacted within 5 working days
